**1. Monthly Purchase Trend**

- **Trend:** Orders grew slowly from about 3 to 5 a month in early 2023 to 20 to 40 a month by 2025 and early 2026. Then there is a sharp spike to roughly 80 orders just before Jul 2026.
- **Insight:** Order volume has grown overall, but the last spike is far above the normal pattern. Check what happened that month (a sale, a campaign or a festival). The drop right after it is probably because July 2026 is only a partial month, since your date filter ends on 7/14/2026.

**2. Order Frequency Distribution**

- **Trend:** The bars fall steeply: 302 customers ordered once, 19 twice, 1 three times and 1 five or more.
- **Insight:** About 93.5% of registered customers (302 of 323) never came back for a second order. Repeat purchase is the biggest opportunity, and even a small improvement in retention would make a visible difference.

**3. First-Time vs Repeat Customers (donut)**

- **Trend:** First-Time customers take 93.21% of the ring and Repeat customers only 6.48%. Guest is a tiny sliver.
- **Insight:** This matches Chart 3: only about 6.5% of customers (21) buy again. Follow-ups such as a thank-you coupon or a reorder reminder after the first order would target the right group.

**4. Orders by Status**

- **Trend:** Completed orders lead with 264, followed by processing with 102.
- **Insight:** About 72% of the orders shown (264 of 366) are completed, while 102 are still processing. That is a large number to be pending, so it is worth checking for fulfilment delays.
