Orders by Status

Count of order_id by status

1. **Monthly Purchase Trend:**
   - **Trend:** Order volume generally increases from early 2023 through mid-2026, with a noticeable peak near the end of the displayed period.
   - **Insight:** The dataset ends on July 14, 2026, making July an incomplete month. Exclude it from full-month comparisons to avoid interpreting a partial-month spike or drop as a genuine trend.
2. **Order Frequency Distribution:**
   - **Trend:** Of 323 registered customers, 302 placed one order, 19 placed two orders, one placed three orders, and one falls into the 5+ order category.
   - **Insight:** Most registered customers purchased only once, suggesting an opportunity to encourage repeat purchases. Validate the frequency categories against the source data before drawing final conclusions.
3. **First-Time vs. Repeat Customers:**
   - **Trend:** First-time customers account for 302 (93.5%) of registered customers, while 21 (6.5%) are repeat customers.
   - **Insight:** Repeat purchasing is relatively uncommon in the current dataset. Reorder reminders, follow-up messages, and relevant offers could be tested to encourage additional purchases.
4. **Orders by Status:**
   - **Trend:** Completed orders lead with 405 (58.7%), followed by 285 processing orders (41.3%).
   - **Insight:** A substantial share of orders remains in processing status. Review these orders to identify potential fulfillment delays and determine whether follow-up is needed.
